ATTACHMENT A

SLPL is seeking proposals for a managed detection and response solution. It should satisfy all of the industry standards for MDR. This solution should also work in harmony with our FortiEDR endpoint product, Google Workspace, and Active Directory.

Scope of work

General Expectation

The vendor should provide us access to a SOAR (*Security Orchestration and Automated Response*) platform. SLPL should be made aware if there is a need to install any additional agents for detection. We should also be able to customize the service offering to a tailored solution for each customer. Additionally, the vendor should provide 24x7x365 SOC as a Service.

Detection Expectation

The service provider should leverage the Mitre ATT&CK framework for threat detection and should provide full visibility on what detection contents are deployed for our environment; have the ability to transform that data to fit the format that another system requires. The solution should have the ability to learn from decisions (ML/AI) that analysts have made in the past and use those to help analysts make better and faster decisions moving forward. It should detect whether a behavior is normal or not, and use that in the triage process.

Response Expectation

The solution should offer a case management portal so we can see all the in-progress as well as escalated cases, and give us access to ALL the systems that their SOC analysts use for the MDR service. It will provide us with the ability to enrich cases with additional data or take action in an automated way. This solution should give us the ability to find and link similar cases automatically, and connect with our existing case management system if we decide to stick with that.

Integration Expectation

This solution should have the ability to integrate all the tools in my security stack - whether it is to fetch data or to take action.

Playbook Automation

The solution should include security orchestration, automation, and response (SOAR) functionality, and provide us with the ability to build a playbook using an easy-to-use visual editor. Further, it should provide us with a simple description playbook to get the data automated in a timely fashion. The automation platform should have the ability to automate a playbook without having to write any code.

Reporting/Dashboards

We would like an MDR value dashboard that shows us how many alerts/cases are handled by the MDR service. It should have the ability to create a custom dashboard with the KPI of our interest. The ability to provide reports via email and pdf is expected per industry standards. We should be able to visualize the data in a multitude of ways using this solution. (i.e. *a table, a score, a pie chart, line chart, or a bar chart*). The solution should have the ability to extract insights from data using powerful analytics and display that on a dashboard.
